PROFESSIONAL SUMMARY

Software Engineer targeting SDE / Software Engineer I roles. Computer Science graduate experienced in building backend APIs, SQL-backed applications, and full-stack workflows using Python, JavaScript, and MySQL. Strong in data structures and algorithms, schema design, query optimization, Git-based development, and translating product requirements into reliable software.

EDUCATION

B.Tech in Computer Science

Sep 2022 – July 2026

Shri Ramswaroop Memorial University, Lucknow, India

Graduated

Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Machine Learning

Secondary and Higher Secondary Education (CBSE)

Graduated

Lucknow Public School, Lucknow, India

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C++

Backend: REST APIs, CRUD services, automation scripts, unit testing

SQL: Joins, indexing, query optimization, relational schema design, MySQL

Frontend: HTML, CSS, JavaScript for full-stack applications

Tools: Git, GitHub, VS Code

DSA: Arrays, hashing, trees, graphs, dynamic programming, problem solving (LeetCode: [nik0096](#))

Libraries: Pandas, NumPy, Scikit-learn

EXPERIENCE

Software Development Intern

Jun 2023 – Aug 2023

Hubble Mind

- Designed and maintained MySQL schemas for client project records, including tables, relationships, and CRUD workflows.
- Wrote and optimized SQL queries using joins and indexing to improve reporting reliability for internal tools.
- Worked with engineering teams on backend data pipelines, debugging data issues, and shipping database-backed features.
- Used Git for version control and collaborated on day-to-day development workflow (branching, reviews, integration).

PROJECTS

ERP System

Python, JavaScript, MySQL, REST APIs

Full-stack backend and database application

github.com/nikpomp

- Built a centralized ERP platform for inventory, employee management, and billing with end-to-end CRUD flows.
- Designed a relational MySQL schema (keys, joins, indexes) supporting 50+ inventory and employee operations.
- Implemented backend APIs and business logic for create/update/delete workflows, validation, and reporting.
- Developed JavaScript, HTML, and CSS interfaces consumed by the APIs for cross-module usability.

AI Verification Backend

Python, REST APIs, NLP, SQL

Backend service with scoring API and chatbot workflow

github.com/nikpomp

- Built a Python backend that accepts user-submitted text, runs preprocessing (tokenize, clean, TF-IDF), and returns credibility scores via API.
- Designed a request/response workflow for automated verification, user feedback, and natural-language explanations.
- Structured stored results for repeat queries and added input validation plus error handling for unreliable inputs.

Product Recommendation Service

Python, Pandas, Scikit-learn, SQL

Content-based recommendation backend

github.com/nikpomp

- Implemented a recommendation service using content-based filtering and cosine similarity over product metadata.
- Processed and modeled product data with Pandas and Scikit-learn; exposed ranked recommendations as a reusable backend flow.

- Designed schema and query patterns to fetch candidate items efficiently for personalized results.

LEADERSHIP

- Member, Tech Fusion Club; Coordinator, Sports Club; Participant, Smart India Hackathon (drone-based ET sensing).
